The marijuana process looks way to complex, unless it was meant to look like that? :P
Just like the Unknowns process, you have the same (or similar) tasks duplicated. Will talk later...since I'm not sure what the intention is.

In computer science world, we usually use the decision diamond to branch a decision, like yes/no, etc. We use a terminator (oval) to start or end a process.
You are free to mix and match to your liking, but decision diamonds are usually universally meant to convey decisions and not task completion.

Why not?

Fine: I will print it out and you can review it.
